9~35~37~38~41~42	9 - Data collection communication network systems, comprised of combination encoder/transceivers, portable, mobile, and stationary data collection transceivers, and intelligent communication adapters; data collection computer systems, namely, portable and stationary terminals, printers, communications controllers, communications cradles, function-specific peripherals, computer operating programs, and computer application programs; electrical energy utilization metering devices, namely, commercial and industrial utility meters for electricity; downloadable computer software for use in electrical load control and management; downloadable computer software for use in wireless meter data collection, storage and management; wireless meter reading instruments being electricity meters; electric control devices for heating, energy management, and devices for cooling being remote controls for air-conditioning apparatus; thermostats; apparatus for transmission of communication and storage of information being computer storage devices, namely, high-speed storage subsystems for storage and backup of electronic data either locally or via a telecommunications network, in the nature of electricity meters, remote transmitter controllers for radio-controlled devices, and meter data computer storage devices featuring data related to pricing, consumer usage, billing and load

forecasting; downloadable computer software for use in monitoring, controlling, managing and generating reports regarding energy, electricity, energy consumption and usage, energy efficiency, including through demand response and load shifting energy usage management, billing and related data and information in the field of energy consumption; downloadable cloud-based software for connecting, operating and managing networked climate control devices in the internet of things (iot), namely, software for use in monitoring, controlling, managing and generating reports regarding energy, electricity, energy consumption and usage, energy efficiency, including through demand response and load shifting energy usage management, billing and related data and information in the fields of energy consumption and usage; flow meters and fluid meters for gas and water; gas meters; water meters; electricity meters; flow meters and fluid meters for gas, water and electricity and structural parts related thereto; smart energy meters for tracking and monitoring energy usage; fluid oscillators, electromagnetic static flow meters, electronic and mechanical electricity meters and structural parts related thereto; pressure regulators for use with flow meters, energy meters and electricity meters and structural parts related thereto; gas flow meters used with flow meters; energy meters for tracking and monitoring gas, fluids, and electricity usage; electrical smart energy meters for tracking and monitoring energy usage; electromagnetic static flow meters, electronic and mechanical electricity meters and structural parts related thereto; electrical energy meters for tracking and monitoring electricity usage; acoustic sensors for use with electric meters, gas meters, or water meters; advanced metering infrastructure devices, namely water meters, gas meters, and electric meters and downloadable advanced metering infrastructure computer software for tracking, monitoring, controlling, or reporting energy, gas, and water usage, sold as a unit; electromagnetic static flow meters, electronic and mechanical electricity meters; spare parts related to such flow meters; pressure regulators for use with flow meters, oil meters, energy meters and electricity meters; card-operated, and smart-card operated electricity and gas meters; meters used with flow meters; energy meters for tracking and monitoring gas, fluid fuel and electricity usage; apparatus for the memorization of data related to such flow meters, namely, event recorders and

computers; apparatus, namely, radio transmitters and electrical cable transmitters for the electronic transmission of data; systems consisting of computers and computer software for use in database management, radio transmitters, electrical cable transmitters, computer network hubs and computer printers for remotely reading and remotely transmitting and remotely retrieving and reviewing data related to such meters; software used to program devices that are used to remotely read meters; computer terminals; electronic modems; transponders; terminals for transaction management; flow meters and fluid flow meters for use with gas, water and oil; fluidic oscillators being automatic liquid-flow control machines and instruments; electromagnetic static flow meters and structural parts therefore; electricity meters and structural parts therefore; meters for electricity and gas and flow meters for fluid fuel flow and supply that all feature a prepayment apparatus being an electronic payment terminal, namely, token-operated, coin-operated and card-operated electronic card readers for credit cards and mechanisms for coin-operated apparatus; apparatus for the memorization of data related to flow meters, namely, event recorders and computers being computer storage devices, namely, high-speed storage subsystems for storage and backup of electronic data either locally or via a telecommunications network in the field of flow meters; transmission apparatus, namely, radio transmitters, cable transmitters for the electronic transmission of data being transmitters for audio and visual signals for transmission over twisted pair cables; smart home computer network hub systems comprised of computer hardware, downloadable computer software for use in database management, radio transmitters, cable television transmitters, and computer printers for printing documents, all for remotely reading and remotely transmitting and remotely retrieving and reviewing data related to flow meters; mobile signal transreceiver unit for use with automatic meter reading and telemetry in utilities and energy industries; computer software and software platform accessed via global communication networks for managing water and energy costs and uses and for optimizing water and energy procurement procedures by collecting, managing, analyzing, mining, integrating, reporting, benchmarking, validating, managing load-reduction programs, forecasting, billing, managing, analyzing, and

reporting water, energy and energy-related data; computer software for use in distributed information access and collection and building device integration, control and management for use in water and energy management, namely, use, analysis and purchasing of the same; computer software for transmission and distribution line design and optimization; computer software for surveying and engineering in connection with transmission and distribution line design and optimization; computer software for creating and visualizing two-dimensional and three-dimensional models for transmission and distribution line design and optimization; computer software for importing and exporting survey data and models for transmission and distribution line design and engineering; computer software for interfacing and communicating with other sets of computer programs for use in the field of transmission and distribution line design, construction, material management and asset management; computer software for programming, activating, modifying, controlling and communicating with utilities systems and energy equipment; computer software for use by the utilities and energy industries for automating and monitoring the distribution of utility, energy and water services to customers; computer hardware and software for use in the utilities, energy and water industries, namely, for use in association with electric, gas, energy, and water facilities and management; computer software for scheduling, assigning, dispatching and monitoring field operations for the utilities and energy industries; portable electronic utility meter reading and billing unit therefor; computer software for use in data collection and control, communications and data exchange, electronic meter reading, off-site meter reading, keyed meter reading, and meter data recorders, all for use in the utilities and energy industries; computer software for billing customer accounts, for scheduling customer orders and for managing utility meters and energy equipment; computer software, namely, computer operating programs and computer software for application and database integration for use in the utilities and energy industries; computer software for load management and demand response; computer software for design and designation of transmission and distribution lines and substations; communications software and hardware for connecting computer network users; communications software and

hardware for connecting global computer, intranet and extranet networks; data collection computer and communication network systems comprised of computer hardware, computer operating software and computer software for data collection applications, namely, automated meter reading, distribution automation, two-way communications between networks and utility meters, and demand side management applications via the internet, intranet, extranets, radio frequency networks, wireless networks, telephone lines, and integrated communications networks, namely, public switched telephone networks, virtual private networks, private networks, public networks, and cellular networks, all for use in the utility, power, and energy industries; meter interface units comprised of digital, mechanical and optical sensors, encoders and transmitters; inbound, outbound, two-way communication systems, namely, computer hardware, computer operating software and computer software for data collection and remote programming applications, namely, two-way automated meter reading, distribution automation, remote communications between networks and between and among utility meters, and demand side management applications via the internet, intranet, extranets, radio frequency networks, wireless networks, telephone lines, and integrated communications networks, namely, public switched telephone networks, ip-based public networks, virtual private networks, private networks, broadband over powerline networks, public networks and cellular networks for energy data, and other utility meter monitoring points; telephone, cellular and radio transreceivers, intelligent communication adapters, and switchpoints for use in the utility, power and energy industries; energy usage monitoring devices being electronic energy utilization metering devices, namely, energy meters for tracking and monitoring energy usage, meter interfaces being remote metering systems in the nature of wireless controllers to remotely monitor and control the function and status of other electrical, electronic, and mechanical devices or systems, transponders for tracking and monitoring energy usage, and data collection units and electronic instrumentation for reading and collecting energy consumption data being computer storage devices, namely, high-speed storage subsystems for storage and backup of electronic data either locally or via a telecommunications

network; downloadable computer software and recorded computer software for receiving and monitoring usage and distribution information from remote sensors and meters; computer hardware and peripheral devices; mobile signal transreceiver units being receivers of electronic signals for automatically reading meters and collecting telemetry data in the utility and energy industries; downloadable computer software and downloadable computer software platforms for managing water and energy costs and for optimizing water and energy procurement procedures by collecting, managing, analyzing, mining, integrating, reporting, benchmarking, validating, managing load-reduction programs, forecasting, billing, managing, analyzing, and reporting water, energy and energy-related data; downloadable computer software for distributing and accessing information and collecting and building device integration, controlling and managing water and energy, and analyzing water and energy management; downloadable firmware and device drivers for energy and distributed energy resources management; sensors for use with electric meters; wireless meter reading instruments being electricity meters.~35 - Services comprising the recording of data relating to water, gas, thermal energy and electricity meter readings in a computer file; automatic billing service; providing technical information and advice relating to automatic billing; data collection and management and analysis of automated billing data; data processing services, namely, reading and recording data related to water, gas, heat, and/or electricity meters; data processing services for use in the utility, power and energy industries; utility bill management services, namely, tracking, reporting, analyzing and delivering energy information in the form of thermostat displays, web pages, or mailings; management of energy data, customer data and their energy usage, namely, measurement or verification of energy usage; promoting public awareness about energy generation, consumption, transmission, impact, conservation, and efficiency; utility meters reading services, namely, reading water, gas, thermal energy and electricity meters; remote utility meter reading; remote reading of utility meters being utility meter reading services provided online; providing resources in the nature of an interactive website featuring information and links in the field of energy conservation and efficiency (Term considered too vague by the International Bureau pursuant to Rule 13 (2)

(b) of the Regulations).~37 - Repair and maintenance of computer hardware and software systems.~38 - Telecommunication, communication and networking services, namely, electronic delivery and transmission of messages, data, documents and information via the Internet, intranets, extranets, radio frequency networks, satellite, wireless networks and telephone lines; communication services, in the nature of electronic data exchange services between computer terminals and a meter; communication services in the nature of electronic data exchange services between computer terminals and a detector; communication services in the nature of electronic data exchange services between computer terminals and a data reader; providing multiple-user access to a global computer information network; providing multiple-user access to local and wide area networks; electronic remote transmission of data relating to water, gas, thermal energy and electricity meters; remote transmission of data related to water, gas, heat and/or electricity meters by means of radio, cable, computer network being wireless electronic transmission of data via radio, cable and computer networks; communication services by means of telephone, mobile radio, satellite and cable radio transmitter in the nature of telephone, mobile radio, satellite and cable radio transmitter communication services; electronic transmission of messages and information related to flow meters by means of electronic computer communications networks; providing communication between computers and flow meters, electronic sensors, detectors, and information readers being communication services, namely, providing electronic transmission of information stored in a database via interactively communicating computer systems; telecommunications services, namely, electronic transmission of data related to remote reading of meters measuring use and transmittal of electricity, gas, water and thermal energy.~41 - Providing a website featuring non-downloadable instructional videos in the field of energy conservation and efficiency (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); educational services, namely, conducting on-line exhibitions and displays and interactive exhibits in the field of energy conservation and efficiency; conducting workshops and seminars in energy conservation and energy transmission.~42 - Computer programming in the fields of energy, water, and gas;

providing technical information and advice relating to remote meter reading; scientific and technological services in the field of remote meter reading and automatic billing in the nature of computer programming; research and design of electricity, gas, water, energy, oil and flow meters used for remote meter reading and automatic billing; design and development of computer hardware and software; computer related services and consulting for the utilities industries, namely, computer consulting for electric, gas and water facilities management; computer software programming for others; providing technical information related to remote reading of utility meters; online non-downloadable computer software for use in electrical load control and management (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); online non-downloadable computer software for use in wireless meter data collection, storage and management (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); online non-downloadable application software used to control and enable an apparatus for transmission of communication and storage of information being computer storage devices, namely, high-speed storage subsystems for storage and backup of electronic data either locally or via a telecommunications network, in the nature of electricity meters, remote transmitter controllers for radio-controlled devices, and meter data computer storage devices featuring data related to pricing, consumer usage, billing and load forecasting (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); online non-downloadable computer software for use in monitoring, controlling, managing and generating reports regarding energy, electricity, energy consumption and usage, energy efficiency, including through demand response and load shifting energy usage management, and related data and information in the field of energy consumption (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); online non-downloadable cloud-based software for connecting, operating and managing networked climate control devices in the Internet of Things (IoT), namely, software for use in monitoring, controlling, managing and generating reports regarding energy, electricity, energy consumption and usage, energy efficiency, including through demand response and load shifting energy

usage management, and related data and information in the fields of energy consumption and usage (Term considered too vague by the International Bureau pursuant to Rule 13 (2) (b) of the Regulations); cybersecurity services in the nature of restricting unauthorized access to computer and power grid systems; design and development of computer software for biometrics, identity awareness, identity protection, fraud prevention, project management, technical skills and security management; design and development of electronic data security systems; providing information in the field of energy efficiency, including energy consumption, impact and conservation.
